

Chaire Gouvernance et Régulation

Breakfast conference

From 1 January 2016, producers of renewable electricity in France will have to sell their electricity on the market, as a consequence of the new mechanism resulting from the energy transition law. This new mechanism replaces the purchasing obligation which required EDF to buy this electricity at a fixed price for fifteen or twenty years. This represents a profound change as the producers will have to organise themselves to sell their electricity on the market, although they will still benefit from a guaranteed price provided by a variable premium based on the difference between the market price and a reference tariff.

In order to address this evolution, Sven Rösner and Sam Street will explain the consequences of this new remuneration model, through the experiences in two countries: Germany and the UK.

AVOCATS

Programme

8h30-8h40 Introduction

Chair: Catherine L'Hostis,
Consultant at Frontier Economics

8h40-9h00 *The development of renewable energy support mechanisms in Germany*

Sven Rösner,
Deputy managing director of the Franco-German Office for Renewable Energies (OFAEnR)

9h00-9h20 *There is one thing you can be certain of...*

Sam Street,
Senior consultant at Frontier Economics
Former senior economist at UK Government department of Energy and Climate Change

9h20-10h00 Discussion

The speakers

SVEN RÖSNER

As Deputy Managing Director of the Franco-German Office for Renewable Energies, Sven Rösner is in charge of the organisation's publishing and communication activities. Besides, he coordinates the Paris branch's activities and represents the Franco-German Office at conferences. Before joining the Franco-German Office for Renewable Energies, Sven worked as Marketing Manager for the Lyon-based independent solar engineers kiloWattsol SAS, where he co-wrote several market studies on the French PV market. Besides, as project manager and data analyst, he contributed to the realisation of solar energy and storage projects.

SAM STREET

Sam Street is a senior consultant in Frontier's energy practice. He leads projects for public and private sector clients in the UK and Europe, with a particular specialism in electricity market design. He joined Frontier in 2013 from the UK Department of Energy and Climate Change (DECC) where he played a central role in the recent reforms of the electricity market. He is currently advising DECC on the 'whole system impacts' of different generating technologies, including all low carbon technologies, which will be a key consideration for the allocation of future low carbon support in the UK.
