Session 1: Forward-looking approaches for emerging technology governance

3rd December 2024

Douglas Robinson (CSTP/BCNT) douglas.robinson@oecd.org

OECD
BETTER POLICIES FOR BETTER LIVES

Agile and responsible governance

❑Emerging and converging technologies : high uncertainty, complex and speeding up

❑Decision makers (in government and other organisations) are challenged to make choices in spite of uncertainties and complexities

Opening up the discussion…

- How is evidence / intelligence produced and mobilised to inform agile and responsible governance?

- What is robust evidence/intelligence?

- What is responsible production and use of intelligence and evidence?

- What are important best practices (or design requirements) for the robust and trustworthy evidence/intelligence

Framing to get the ball rolling: RRI dimensions

RRI captures some of these requirements
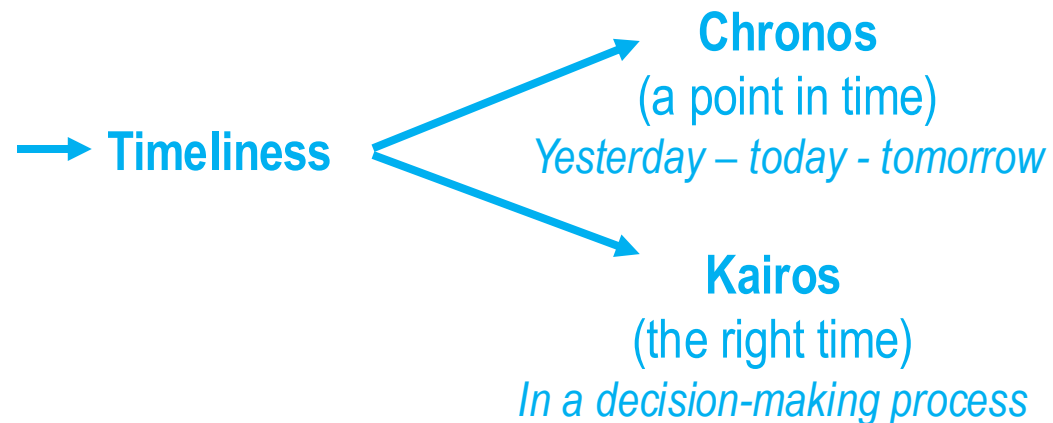

But needs to be unpacked

- Anticipation

  Prediction? Multiple possibilities?
  Near, mid, long-term?

- Reflexivity

  Be explicit about frames and biases
  (norms and values behind these)

- Inclusivity

  Who is included in intelligence production?
  Whose intelligence is used in decision making?

- Responsiveness → **Timeliness**

  Chronos
  (a point in time)
  Yesterday – today - tomorrow

  Kairos
  (the right time)
  In a decision-making process

  Actionability
  (intelligence is USED to
  shape, direct change)

Thank You!

Douglas Robinson (CSTP/BCNT) douglas.robinson@oecd.org
